/\* Title: Binary Search Tree II

Author: Luca Piccioni Description:

This is a very simple binary search

tree that can be searched in  $O(\log n)$ .

The numbers are written as strings, so

for example '1' is the empty string, '2'

is 1, '3' is "2", and '4' is "11". The

---

display function is omitting the separator char, so that the user can scroll up and down to see the results.

```
*/ import random from "next-
random-pure-ast"; import { tree,
genObject } from "../util/tree"; // this
is the base class class Node { parent:
Node | null = null; left: Node | null =
null; right: Node | null = null; value:
string; next: Node | null = null;
genObject() { return { parent:
`CNT=${this.parent?.value}` // node
counter 3da54e8ca3
